

Vincent Vignal is Director of Research at the National Center for Scientific Research (CNRS, France). He works at the Lab ICB, Dijon (France). This Lab is jointly operated by CNRS and University of Bourgogne Franche Comté. He received his Ph. D. (1996) in Mechanical Sciences from the University of Bordeaux, France. He was a post doctoral researcher (JSPS fellow) at the Hokkaido University in Sapporo (Japan) in 1997-98. His primary research interests are in the degradation of materials, including passivation and localized corrosion of metals and alloys, relationships between microstructure - corrosion - mechanical stress/strain. He uses global and local techniques in electrochemistry, mechanics and surface characterization.
